## Table of Contents

### Chapter 1. Linear Algebra

- 1.1. Solution of Linear Systems
- 1.2. Matrices and Vectors
  - Basic Matrix Arithmetic
- 1.3. Gaussian Elimination — Regular Case
  - Elementary Matrices
  - The  $LU$  Factorization
  - Forward and Back Substitution
- 1.4. Pivoting and Permutations
  - Permutation Matrices
  - The Permuted  $LU$  Factorization
- 1.5. Matrix Inverses
  - Gauss–Jordan Elimination
  - Solving Linear Systems with the Inverse
  - The  $LDV$  Factorization
- 1.6. Transposes and Symmetric Matrices
  - Factorization of Symmetric Matrices
- 1.7. Practical Linear Algebra
  - Tridiagonal Matrices
  - Pivoting Strategies
- 1.8. General Linear Systems
  - Homogeneous Systems
- 1.9. Determinants

### Chapter 2. Vector Spaces

- 2.1. Vector Spaces
- 2.2. Subspaces
- 2.3. Span and Linear Independence
  - Linear Independence and Dependence
- 2.4. Bases
- 2.5. The Fundamental Matrix Subspaces
  - Kernel and Range

The Superposition Principle  
Adjoint Systems, Cokernel, and Corange  
The Fundamental Theorem of Linear Algebra

2.6. Graphs and Incidence Matrices

Chapter 3. Inner Products and Norms

3.1. Inner Products

Inner Products on Function Space

3.2. Inequalities

The Cauchy–Schwarz Inequality

Orthogonal Vectors

The Triangle Inequality

3.3. Norms

Unit Vectors

Equivalence of Norms

3.4. Positive Definite Matrices

Gram Matrices

3.5. Completing the Square

The Cholesky Factorization

3.6. Complex Vector Spaces

Complex Numbers

Complex Vector Spaces and Inner Products

Chapter 4. Minimization and Least Squares Approximation

4.1. Minimization Problems

Equilibrium Mechanics

Solution of Equations

The Closest Point

4.2. Minimization of Quadratic Functions

4.3. The Closest Point

4.4. Least Squares

4.5. Data Fitting and Interpolation

Polynomial Approximation and Interpolation

Approximation and Interpolation by General Functions

Weighted Least Squares

Least Squares Approximation in Function Spaces

Chapter 5. Orthogonality

5.1. Orthogonal Bases

Computations in Orthogonal Bases

5.2. The Gram–Schmidt Process

A Modified Gram–Schmidt Process

5.3. Orthogonal Matrices

The  $QR$  Factorization

5.4. Orthogonal Polynomials

- The Legendre Polynomials
- Other Systems of Orthogonal Polynomials
- 5.5. Orthogonal Projections and Least Squares
  - Orthogonal Projection
  - Orthogonal Least Squares
  - Orthogonal Polynomials and Least Squares
- 5.6. Orthogonal Subspaces
  - Orthogonality of the Fundamental Matrix Subspaces  
and the Fredholm Alternative

## Chapter 6. Equilibrium

- 6.1. Springs and Masses
  - The Minimization Principle
- 6.2. Electrical Networks
  - The Minimization Principle and the Electrical–Mechanical Analogy
- 6.3. Structures in Equilibrium
  - Bars

## Chapter 7. Linear Functions, Linear Transformations and Linear Systems

- 7.1. Linear Functions
  - Linear Operators
  - The Space of Linear Functions
  - Composition of Linear Functions
  - Inverses
- 7.2. Linear Transformations
  - Change of Basis
- 7.3. Affine Transformations and Isometries
  - Isometry
- 7.4. Linear Systems
  - The Superposition Principle
  - Inhomogeneous Systems
  - Superposition Principles for Inhomogeneous Systems
  - Complex Solutions to Real Systems
- 7.5. Adjoints
  - Self-Adjoint and Positive Definite Linear Functions
  - Minimization

## Chapter 8. Eigenvalues

- 8.1. First Order Linear Systems of Ordinary Differential Equations
  - The Scalar Case
  - The Phase Plane
- 8.2. Eigenvalues and Eigenvectors
  - Basic Properties of Eigenvalues
- 8.3. Eigenvector Bases and Diagonalization

- Diagonalization
- 8.4. Incomplete Matrices and the Jordan Canonical Form
- 8.5. Eigenvalues of Symmetric Matrices
  - The Spectral Theorem
  - Optimization Principles
- 8.6. Singular Values
- Chapter 9. Linear Dynamical Systems
  - 9.1. Linear Dynamical Systems
    - Existence and Uniqueness
    - Complete Systems
    - The General Case
  - 9.2. Stability of Linear Systems
  - 9.3. Two-Dimensional Systems
    - Distinct Real Eigenvalues
    - Complex Conjugate Eigenvalues
    - Incomplete Double Real Eigenvalue
    - Complete Double Real Eigenvalue
  - 9.4. Dynamics of Structures
    - Stable Structures
    - Unstable Structures
    - Systems with Different Masses
    - Friction and Damping
  - 9.5. Forcing and Resonance
    - Electrical Circuits
    - Forcing and Resonance in Systems
  - 9.6. Matrix Exponentials
    - Inhomogeneous Linear Systems
    - Applications in Geometry
- Chapter 10. Iteration of Linear Systems
  - 10.1. Linear Iterative Systems
    - Scalar Systems
    - Powers of Matrices
  - 10.2. Stability
    - Fixed Points
  - 10.3. Matrix Norms
    - Explicit Formulae
    - The Gerschgorin Circle Theorem
  - 10.4. Markov Processes
  - 10.5. Iterative Solution of Linear Systems
    - The Jacobi Method
    - The Gauss–Seidel Method
    - Successive Over–Relaxation (SOR)
    - Conjugate Gradients

- 10.6. Numerical Computation of Eigenvalues
  - The Power Method
  - The  $QR$  Algorithm
  - Tridiagonalization

## Chapter 11. Boundary Value Problems in One Dimension

- 11.1. Elastic Bars
- 11.2. The Green's Function
  - The Delta Function
  - Calculus of Generalized Functions
  - The Green's Function
- 11.3. Adjoints and Minimum Principles
  - Adjoints of Differential Operators
  - Minimum Principles
  - Inhomogeneous Boundary Conditions
- 11.4. Beams and Splines
  - Splines
- 11.5. Sturm–Liouville Boundary Value Problems
- 11.6. Finite Elements
  - Weak Solutions

## Chapter 12. Fourier Series

- 12.1. Dynamical Equations of Continuous Media
- 12.2. Fourier Series
  - Periodic Extensions
  - Piecewise Continuous Functions
  - The Convergence Theorem
  - Even and Odd Functions
  - Complex Fourier Series
  - The Delta Function
- 12.3. Differentiation and Integration
  - Integration of Fourier Series
  - Differentiation of Fourier Series
- 12.4. Change of Scale
- 12.5. Convergence of the Fourier Series
  - Convergence in Vector Spaces
  - Uniform Convergence
  - Smoothness and Decay
  - Hilbert Space
  - Convergence in Norm
  - Completeness
  - Pointwise Convergence

## Chapter 13. Fourier Analysis

- 13.1. Discrete Fourier Series and the Fast Fourier Transform

- Compression and Noise Removal
    - The Fast Fourier Transform
  - 13.2. Wavelets
    - The Haar Wavelets
    - Modern Wavelets
    - Solving the Dilation Equation
  - 13.3. The Fourier Transform
    - Derivatives and Integrals
    - Applications to Differential Equations
    - Convolution
    - Fourier Transform on Hilbert Space
    - The Heisenberg Uncertainty Principle
  - 13.4. The Laplace Transform
    - The Laplace Transform Calculus
    - Applications to Initial Value Problems
    - Convolution
- Chapter 14. Vibration and Diffusion in One-Dimensional Media
  - 14.1. The Diffusion and Heat Equations
    - The Heat Equation
    - Smoothing and Long Time Behavior
    - Inhomogeneous Boundary Conditions
    - The Heated Ring
    - The Fundamental Solution
  - 14.2. Similarity and Symmetry Methods
    - The Inhomogeneous Heat Equation
    - The Root Cellar Problem
  - 14.3. The Wave Equation
    - Forcing and Resonance
  - 14.4. d'Alembert's Solution of the Wave Equation
    - Solutions on Bounded Intervals
  - 14.5. Numerical Methods
    - Finite Differences
    - Numerical Solution Methods for the Heat Equation
    - Numerical Solution Methods for the Wave Equation
- Chapter 15. The Laplace Equation
  - 15.1. The Laplace Equation in the Plane
    - Classification of Linear Partial Differential Equations in the Plane
    - Characteristics
  - 15.2. Separation of Variables
    - Polar Coordinates
  - 15.3. The Green's Function
    - The Method of Images
  - 15.4. Adjoints and Minimum Principles

- Uniqueness
- Adjoint and Boundary Conditions
- Positive Definiteness and the Dirichlet Principle
- 15.5. Finite Elements
  - Finite Elements and Triangulation
  - The Finite Element Equations
  - Assembling the Elements
  - The Coefficient Vector and the Boundary Conditions
  - Inhomogeneous Boundary Conditions
  - Second Order Elliptic Boundary Value Problems
- Chapter 16. Complex Analysis
  - 16.1. Complex Variables
    - Examples of Complex Functions
  - 16.2. Complex Differentiation
    - Power Series and Analyticity
  - 16.3. Harmonic Functions
    - Applications to Fluid Mechanics
  - 16.4. Conformal Mapping
    - Analytic Maps
    - Conformality
    - Composition and The Riemann Mapping Theorem
    - Annular Domains
    - Applications to Harmonic Functions and Laplace's Equation
    - Applications to Fluid Flow
    - Poisson's Equation and the Green's Function
  - 16.5. Complex Integration
    - Lift and Circulation
  - 16.6. Cauchy's Integral Formulae and The Calculus of Residues
    - Cauchy's Integral Formula
    - Derivatives by Integration
    - The Calculus of Residues
    - The Residue Theorem
    - Evaluation of Real Integrals
- Chapter 17. Dynamics of Planar Media
  - 17.1. Diffusion in Planar Media
    - Derivation of the Diffusion Equation
    - Self-Adjoint Formulation
  - 17.2. Solution Techniques for Diffusion Equations
    - Qualitative Properties
    - Inhomogeneous Boundary Conditions and Forcing
  - 17.3. Explicit Solutions for the Heat Equation
    - Heating of a Rectangle
    - Heating of a Disk

- 17.4. The Fundamental Solution
- 17.5. The Planar Wave Equation
  - Separation of Variables
- 17.6. Analytical Solutions of the Wave Equation
  - Vibration of a Rectangular Drum
  - Vibration of a Circular Drum
  - Scaling and Symmetry
- 17.7. Nodal Curves

## Chapter 18. Partial Differential Equations in Space

- 18.1. The Laplace and Poisson Equations
- 18.2. Separation of Variables
  - Laplace's Equation in a Ball
- 18.3. The Green's Function
  - The Green's Function on the Entire Space
  - Bounded Domains and the Method of Images
- 18.4. The Heat Equation in Three-Dimensional Media
  - Heating of a Ball
  - The Fundamental Solution to the Heat Equation
- 18.5. The Wave Equation in Three-Dimensional Media
  - Vibrations of a Ball
- 18.6. Spherical Waves and Huygen's Principle
  - The Method of Descent

## Chapter 19. Nonlinear Systems

- 19.1. Iteration of Functions
  - Scalar Functions
  - Quadratic Convergence
  - Vector-Valued Iteration
- 19.2. Solution of Equations and Systems
  - The Bisection Algorithm
  - Fixed Point Methods
  - Newton's Method
  - Systems of Equations
- 19.3. Optimization
  - The Objective Function
  - The Gradient
  - Critical Points
  - The Second Derivative Test
  - Minimization of Scalar Functions
  - Gradient Descent
  - Conjugate gradients

## Chapter 20. Nonlinear Ordinary Differential Equations

- 20.1. First Order Systems of Ordinary Differential Equations

	Scalar Ordinary Differential Equations
	First Order Systems
	Higher Order Systems
20.2.	Existence, Uniqueness, and Continuous Dependence
	Existence
	Uniqueness
	Continuous Dependence
20.3.	Stability
	Stability of Scalar Differential Equations
	Linearization and Stability
	Conservative Systems
	Lyapunov's Method
20.4.	Numerical Solution Methods
	Euler's Method
	Taylor Methods
	Error Analysis
	An Equivalent Integral Equation
	Implicit and Predictor–Corrector Methods
	Runge–Kutta Methods
	Stiff Differential Equations
Chapter 21.	The Calculus of Variations
21.1.	Examples of Variational Problems
	Minimal Curves and Geodesics
	Minimal Surfaces
21.2.	The Simplest Variational Problem
	The First Variation and the Euler–Lagrange Equation
	Curves of Shortest Length
	Minimal Surface of Revolution
	The Brachistochrone Problem
21.3.	The Second Variation
21.4.	Multi-dimensional Variational Problems
21.5.	Numerical Methods for Variational Problems
	Finite Elements
	Nonlinear Shooting
Chapter 22.	Nonlinear Partial Differential Equations
22.1.	Nonlinear Waves and Shocks
	A Nonlinear Wave Equation
22.2.	Nonlinear Diffusion
	Burgers' Equation
	The Hopf–Cole Transformation
	Viscosity Solutions
22.3.	Dispersion and Solitons
	The Korteweg–deVries Equation

## 22.4. Conclusion and Bon Voyage

### Appendix A. Vector Calculus in Two Dimensions

- A.1. Plane Curves
- A.2. Planar Domains
- A.3. Vector Fields
- A.4. Gradient and Curl
- A.5. Integrals on Curves
  - Arc Length
  - Arc Length Integrals
  - Line Integrals of Vector Fields
  - Flux
- A.6. Double Integrals
- A.7. Green's Theorem

### Appendix B. Vector Calculus in Three Dimensions

- B.1. Dot and Cross Product
- B.2. Curves
- B.3. Line Integrals
  - Arc Length
  - Line Integrals of Vector Fields
- B.4. Surfaces
  - Tangents to Surfaces
- B.5. Surface Integrals
  - Surface Area
  - Flux Integrals
- B.6. Volume Integrals
  - Change of Variables
- B.7. Gradient, Divergence, and Curl
  - The Gradient
  - Divergence and Curl
  - Interconnections and Connectedness
- B.8. The Fundamental Integration Theorems
  - The Fundamental Theorem for Line Integrals
  - Stokes' Theorem
  - The Divergence Theorem

### Appendix C. Series

- C.1. Power Series
  - Taylor's Theorem
- C.2. Laurent Series
- C.3. Special Functions
  - The Gamma Function
  - Series Solutions of Ordinary Differential Equations
  - Regular Points

The Airy Equation  
The Legendre Equation  
Regular Singular Points  
Bessel's Equation
